## Abstract

*Employee performance is crucial for organizations aiming to achieve strategic objectives and maintain a competitive advantage in dynamic markets. This study investigates the relationship between human resource management practices and employee performance in Dangote cement company Gboko. The study examines how employee behaviour is influenced by human resource management (HRM) practices, focusing on training and development programs, recruitment and selection processes. A quantitative research design was adopted, using a survey method to gather primary data from employees at Dangote Cement Plant. This design is suitable because it allows for the collection of standardized data across a broad sample, and generalize the relationships between HRM practices and employee performance can be statistically analyzed. Furthermore, aligning well with the research objective of quantifying the impact of specific HRM strategies on performance outcomes. Pearson correlation was used to measure the strength and direction of the linear relationships between HRM practices. Pearson correlation is appropriate because the data is continuous, and the aim was to determine the degree of association between variables. The significant results—training programs ($r = 0.771$, $p < 0.01$), performance-based incentives ($r = 0.713$, $p < 0.01$), and recruitment processes ($r = 0.704$, $p < 0.01$)—confirm the strong positive relationships between these variables, supporting the hypothesis that tailored HRM practices enhance workforce effectiveness in the cement manufacturing sector. The study recommends that Dangote Cement Company Gboko should prioritize regularly updating and enhancing training programs to ensure employee skills remain competitive with the evolving demands of the cement manufacturing sector.*

**Keywords:** HRM Practices, Training and development, Employee performance, Recruitment, Selection processes.

## Introduction

Employee performance is crucial for organizations striving to sustain a competitive advantage in dynamic markets. It reflects the ability of an organization's workforce to transform various resources—such as funds, equipment, labor, and materials—into valuable outputs, thereby supporting strategic objectives and enhancing organizational flexibility (Boylan & Turner, 2017; Jalagat, 2017). In industries across the globe, including those within emerging economies, the effectiveness of human resource management (HRM) practices has become a pivotal factor in optimizing employee performance. This is particularly significant in knowledge-based sectors where the intellectual contributions of employees are key drivers of organizational success (Ariani, 2023).

Despite the acknowledged importance of effective HRM practices, many organizations, especially in regions like Nigeria, face challenges in implementing these strategies effectively (Boylan & Turner, 2017). The Dangote Cement Plant in Gboko, a prominent facility within one of Africa's largest industrial conglomerates, is no exception. While the plant plays a critical role in the economic development of Benue State through job creation and substantial contributions to both local and international markets, it grapples with maximizing employee performance. This is evident from its deployment of extensive training and development programs, performance-based incentives, and stringent recruitment and selection processes. These efforts are aimed not only at enhancing operational efficiency but also at ensuring the production of high-quality cement necessary for major infrastructure and building projects across Nigeria.

However, the application of these HRM practices at the Gboko plant has not been without its challenges. Issues such as the adequacy of training programs, the effectiveness of incentives, and the robustness of recruitment processes in truly enhancing performance are still areas of concern. Furthermore, while the plant commits to sustainable practices and corporate social responsibility, the link between these initiatives and actual improvements in employee performance remains underexplored in the context of Nigeria's industrial sector (Boylan & Turner, 2017).

This study is motivated by a distinct gap in focused research on how specific HRM practices influence employee performance within Nigeria's cement industry, particularly at the Dangote Cement Plant. Previous studies have often discussed generic HRM techniques and their impacts broadly, with little attention to contextual specifics in different industrial settings. Thus, this research aims to identify which HRM techniques are most effective in enhancing employee performance specifically at the Dangote Cement Plant in Gboko. By doing so, it seeks to provide actionable insights that can help overcome the existing obstacles and tailor HRM strategies to the unique needs of the Nigerian industrial sector.

Due to this knowledge gap, HR managers may find it challenging to implement the best practices for their particular operating environment, which might result in less productive workers and worse performance from them overall. The main objective of the study is to determine the impact of human resource management practices on employee performance in Dangote cement plant Gboko.

i. To investigate the relationship between training and development programs and employee performance at Dangote cement Company Gboko.
ii. To examine the relationship between performance-based incentive systems

and employee performance at Dangote Cement Company Gboko.

iii. To analyze the relationship between recruitment and selection processes and employee performance at Dangote Cement Gboko.

## Literature Review

### Conceptual Framework

### Human Resource Management (HRM)

Human Resource Management (HRM) is a critical organizational function that encompasses a range of activities aimed at managing employees to align with organizational goals. According to Pandey (2018), HRM involves duties including hiring, selecting, compensating, training and development, and employee appraisal (Khan et al., 2019). It refers to the policies and practices related to managing human resources, including planning, job analysis, orientation, compensation, performance appraisal, and labor relations, all of which influence employee behavior, attitudes, and performance (Laiu & Voicu, 2021). The link between individual and organizational performance is well-documented, leading organizations to continually seek factors that enhance employee performance (Waring, 2016).

### Human Resource Management Practices (HRMP)

Human Resource Management Practices (HRMP) refer to the systematic methods or strategies by which organizations manage their workforces to optimize productivity and align employee goals with organizational objectives. HRMP encompasses a broad range of activities including recruitment, training, employee development, performance appraisal, and compensation management (Noe et al., 2017). These practices are integral to building a strong organizational culture and sustainable competitive advantage by enhancing employee skills, motivation, and overall job satisfaction.

The concept of HRM practices originates from the human relations movement of the early 20th century, which emphasized treating workers as valuable resources whose needs should be addressed to enhance their productivity (Rotich, 2015). This perspective marked a shift from traditional management approaches that viewed employees merely as inputs to the production process. According to Blom et al. (2020), both public and semi-public organizations have increasingly adopted HRM practices from the private sector as a means to improve employee performance and ensure operational efficiency.

Scholarly definitions of HRMP highlight their role in strategic management. Sadek (2016) describes HRM as a philosophy and a set of practices that aim to manage people and the workplace environment and culture effectively. This management is essential for enabling employees to contribute effectively and productively towards the attainment of the organization's strategic and operational goals. Similarly, Armstrong (2010) defines HRM practices as activities and strategies that focus on successfully managing employees at all levels in the business to achieve organizational goals.

### Employee Performance (EP)

Employee performance is the degree to which an employee effectively fulfills their job responsibilities and duties. It serves as an indicator of how well an employee meets the requirements and expectations of their role within an organization. In many management and organizational psychology theories, employee performance is often considered a key dependent variable that influences organizational objectives (Udin, 2023). Additionally, Dalal et al. (2020) explained that behavior pertains to the actions individuals take

to complete their work, while results refer to the outcomes of those actions.

**Job Satisfaction**

This analysis examines three key dimensions: Job Stability, Job Enrichment, and Job Ability (Mahmood et al., 2019). Job satisfaction has attracted considerable attention for its influence on individual performance within organizations (Katebi et al., 2022). Human Resource Management Practices (HRMP) are vital in supporting employees by boosting their confidence, motivation, and job satisfaction, which in turn enhances job performance and contributes to the achievement of organizational goals (Pradhan et al., 2017).

**Employee Engagement**

Employee engagement refers to the degree of commitment and involvement an employee has towards the organization and its values. An engaged employee is aware of their role in achieving business goals and inspires others to work towards the organization's objectives (Farrukh, 2020). When there is mutual confidence and commitment between the organization and its employees, it leads to greater opportunities for development, increased productivity, and ultimately, success in organizational performance (Anitha, 2014).

**Conceptual Framework**

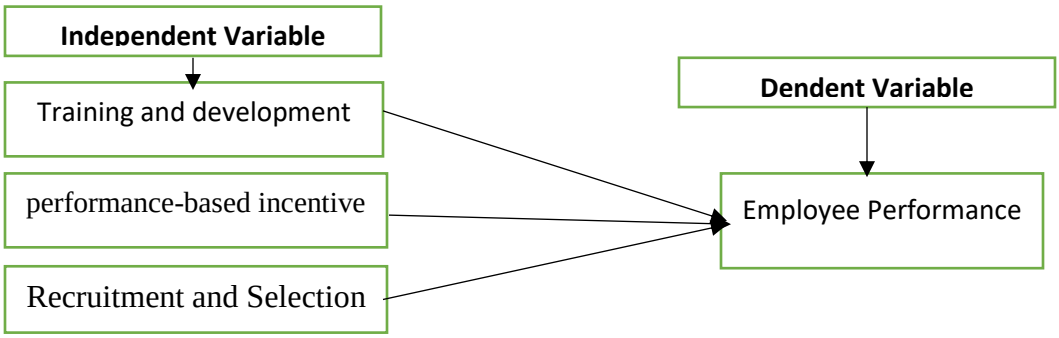

**Figure 1:** Conceptual Framework

**Theoretical Framework**

***Human Capital Theory***

Human Capital Theory, introduced by economists Gary Becker and Theodore Schultz in the 1960s, highlights the economic benefits of investing in employees' education and skills to boost productivity. This theory advocates for workforce development by connecting employee training to performance gains. However, it encounters challenges in quantifying intangible returns on investment and may place excessive emphasis on education while overlooking factors like motivation and job satisfaction. Within the context of Dangote Cement Company Gboko, the theory serves as a foundation for HR practices focused on enhancing employee skills. Critics argue that it reduces employees to mere economic assets and assumes that all employees will respond uniformly to training.

**Empirical Review**

Recent empirical research underscores the significant influence of Human Resource Management Practices (HRMP) on various aspects of organizational performance and employee behavior. For instance, a study conducted by Chen et al. in 2021 aimed to explore how HRMP affect employee job satisfaction and turnover intentions within the tech industry. They used a cross-sectional survey approach, sampling 250 employees

from a larger pool of 1,000 at various technology companies in Silicon Valley. Their findings, derived from multiple regression analysis, revealed that practices like training and development, performance appraisals, and effective compensation management considerably enhance job satisfaction and reduce turnover intentions.

Similarly, Kumar and Pansari in 2019 investigated the relationship between HRMP and organizational performance across 200 manufacturing firms in India. By employing a longitudinal study design and Structural Equation Modeling, they observed a robust positive relationship between structured HRMP—particularly those focused on training and strategic alignment—and improvements in organizational productivity and profitability.

In the creative industries in Spain, Alvarez and Barney's 2020 study examined how performance-based HRM practices influence employee innovation and creativity. They combined qualitative and quantitative methods, involving 300 participants selected through purposive sampling. Their analysis showed that developmental performance appraisals, as opposed to merely evaluative ones, significantly promote creativity and innovative behaviors among employees.

Lastly, Lee et al. in 2022 focused on the healthcare sector in South Korea, assessing the impact of HRMP on employee engagement and performance. Utilizing a case study method encompassing three major hospitals, and involving 350 staff members, their study identified that flexible working conditions, ongoing professional development, and effective recognition programs are crucial for boosting employee engagement and performance in healthcare settings.

.

**Methodology**

This study employed a cross-sectional survey design to investigate the relationship between HRM practices and employee performance at Dangote Cement Plant in Gboko. Data were gathered from 134 management employee and key employees using a structured questionnaire featuring a five-point Likert scale. The questionnaire's validity was improved through a pilot study involving 40 employee members, which led to refinements for clarity and relevance. Reliability was confirmed with Cronbach's alpha coefficients above 0.82, indicating strong internal consistency. Data analysis involved both descriptive and inferential statistics, with Pearson correlation used to test hypotheses and assess the strength of relationships between variables. A simple random sampling technique was utilized to ensure full representation of respondents from various departments within Dangote Cement Company, Gboko

**Results and Discussions**

**Table 1: Questionnaires Distributed**

| No of Questionnaire | No of Questionnaire Returned | No of Questionnaire Not Returned | (%) of Returned | (%) of Not Returned |
|---|---|---|---|---|
| **134** | 128 | **6** | **95.52** | **4.48** |

**Source: field survey, 2024 as computed from SPSS version 27.**

Table 2 shows that a total number of (134) questionnaires were distributed and (128) of the administered questionnaires were filled and returned valid for analyses.

**Table 2: Distributions of respondents by their responses to research questions**

| S/N | Questions | SD | D | U | A | SA | Mean | Std |
|---|---|---|---|---|---|---|---|---|
| | **Training and Development Programs** | | | | | | | |
| **1** | Training programs at Dangote Cement Company Gboko are relevant to my job responsibilities | **7 (5.5%)** | **6 (4.7%)** | **11 (8.6%)** | **38 (29.7%)** | **66 (51.5%)** | **2.097** | **1.10871** |
| **2** | The training I receive at Dangote Cement Company Gboko helps me improve my job performance. | **11 (8.6%)** | **6 (4.7%)** | **5 (3.9%)** | **41 (32.0%)** | **65 (50.8%)** | **3.1304** | **2.19243** |
| **3** | Training programs at Dangote Cement Company Gboko enhance my skills and knowledge | **7 (5.5%)** | **3 (2.3%)** | **18 (14.1%)** | **53 (41.4%)** | **47 (36.7%)** | **4.1014** | **1.07218** |
| **4** | The training and development programs at Dangote Cement Company Gboko are well-organized | **7 (5.5%)** | **16 (12.5)** | **6 (4.7%)** | **51 (39.8%)** | **48 (37.8%)** | **4.2174** | **1.20645** |
| **5** | I am satisfied with the frequency of training programs provided by Dangote Cement Company Gboko | **4 (3.1%)** | **11 (8.6%)** | **8 (6.2%)** | **44 (34.4%)** | **61 (47.7%)** | **3.9652** | **1.17827** |

**Source: Field survey, 2024**

Table 2 shows respondents' opinions on training and development programs at Dangote Cement Company Gboko, indicating a generally positive perception. Over half (51.5%) strongly agree that the training is relevant to their job responsibilities, with a mean score of 2.097. Similarly, 50.8% strongly agree that training improves job performance, reflected in a mean of 4.1304. Regarding skill enhancement, 41.4% agree, resulting in a mean score of 4.1014. The training programs are also seen as well-organized, with 39.8% agreeing, leading to a mean of 4.2174. Lastly, 47.7% strongly agree they are satisfied with the frequency of training, with a mean score of 3.9652. These findings reflect strong agreement on the relevance, effectiveness, and organization of the training programs.

**Table 3: Distributions of respondents by their responses on Performance-Based incentive systems**

| S/N | Items | SD | D | U | A | SA | Mean | Std |
|---|---|---|---|---|---|---|---|---|
| | **Performance-Based Incentive Systems** | | | | | | | |
| **1** | The performance based incentive system at Dangote Cement Company Gboko motivates me to perform better | **8 (6.2%)** | **12 (9.4%)** | **6 (4.7%)** | **50 (39.1%)** | **52 (40.6%)** | **4.1275** | **1.04044** |
| **2** | The incentive system at Dangote Cement Company Gboko fairly rewards employees based on performance | **7 (5.5%)** | **18 (14.1%)** | **3 2.3%** | **70 (54.7%)** | **30 (23.4%)** | **4.0174** | **1.17123** |
| **3** | Performance incentives at Dangote Cement Company Gboko are significant enough to impact my performance | **5 (3.9%)** | **11 (8.6%)** | **9 (7.0%)** | **55 (43.0%)** | **48 (37.5%)** | **4.0464** | **1.13258** |
| **4** | The criteria for performance incentives at Dangote Cement Company Gboko are clear and understandable. | **12 (9.4%)** | **7 (5.5%)** | **20 (15.6%)** | **11 (8.6%)** | **78 (60.9%)** | **4.1623** | **1.33045** |
| **5** | I am satisfied with the performance-based incentives offered by Dangote Cement Company Gboko | **7 (5.5%)** | **18 (14.1%)** | **3 2.3%** | **70 (54.7%)** | **30 (23.4%)** | **4.0174** | **1.17123** |

**Source: Field survey, 2024**

The analysis of respondents' views on performance-based incentive systems at Dangote Cement Company Gboko reveals a generally positive perception. A significant majority agree that the incentives motivate better performance, with a combined 79.7% either strongly agreeing or agreeing, reflected in a mean score of 4.1275. Similarly, fairness in rewarding performance is acknowledged by 78.1% of respondents, yielding a mean of 4.0174. The impact of incentives is positively viewed, with 80.5% in agreement and a mean score of 4.0464. The clarity of criteria is particularly well-regarded, with 69.5% strongly agreeing, leading to a mean of 4.1623. Overall satisfaction with the incentive system is also high, with 78.1% in agreement, showing a mean score of 4.0174. These findings indicate strong approval of the incentive system's effectiveness and fairness.

**Table 4: Distributions of respondents by their responses to Recruitment Selection Process**

| S/N | Items | SD | D | U | A | SA | Mean | Std |
|---|---|---|---|---|---|---|---|---|
| | **Recruitment and Selection Processes** | | | | | | | |
| **1** | The recruitment process at Dangote Cement Company Gboko is transparent and fair and has improved performance and efficiency | **6 (4.7%)** | **9 (7.0%)** | **8 (6.2%)** | **32 (25.0%)** | **73 (57.1%)** | **4.0870** | **1.10941** |
| **2** | I believe that the selection process at Dangote Cement Company Gboko effectively identifies qualified candidates and has improved employee performance in the firm. | **11 (8.6%)** | **9 (7.0%)** | **15 (11.7%)** | **49 (38.3%)** | **44 (34.4%)** | **4.0348** | **1.08046** |
| **3** | The recruitment and selection processes at Dangot.e Cement Company Gboko are efficient and has enhanced productivity among employees | **4 (3.1%)** | **11 (8.6%)** | **8 (6.2%)** | **44 (34.4%)** | **61 (47.7%)** | **3.9652** | **1.17827** |
| **4** | I am satisfied with the overall recruitment and selection processes at Dangote Cement Company Gboko. | **12 (9.4%)** | **7 (5.5%)** | **20 (15.6%)** | **11 (8.6%)** | **78 (60.9%)** | **4.1623** | **1.33045** |
| **5** | The recruitment and selection processes at Dangote Cement Company Gboko contribute to high employee performance. | **8 (6.5%)** | **5 (4.1%)** | **18 (14.6%)** | **10 (8.1%)** | **87 (66.7%)** | **4.25** | **1.27** |

**Source: Field survey, 2024**

Table 4 shows that respondents at Dangote Cement Company Gboko generally perceive the recruitment and selection processes positively. A majority strongly agree (57.1%) and agree (25.0%) that the recruitment process is transparent and fair, contributing to improved performance (mean = 4.0870, SD = 1.10941). Similarly, 34.4% strongly agree and 38.3% agree that the selection process effectively identifies qualified candidates, enhancing employee performance (mean = 4.0348, SD = 1.08046). Additionally, 47.7% strongly agree and 34.4% agree that these processes boost productivity (mean = 3.9652, SD = 1.17827). Overall, 60.9% express satisfaction with the recruitment and selection processes, with a mean score of 4.1623 and a standard deviation of 1.33045, indicating their positive impact on employee performance.

### 4.1 Hypotheses Testing

Decision-making rule. Accept the alternative hypothesis if the computed result is greater than the crucial table value, and reject the null hypothesis otherwise.

### Hypothesis One

**Table 5 Pearson product moment correlation test analysis of relationship between Training and Development programs and employee performance**

| | | Training and Development Programs | Employee Performance |
|---|---|---|---|
| Training and Development Programs | Pearson Correlation | 1 | .771 |
| | Sig. (2-tailed) | | .020 |
| | N | 128 | 351 |
| Employee Performance | Pearson Correlation | .771 | 1 |
| | Sig. (2-tailed) | .020 | |
| | N | 128 | 128 |

. Correlation is significant at the 0.01 level (2-tailed).

**Source: Field survey, 2024**

The table above presents the Pearson product-moment correlation test analysis of the relationship between training and development programs and employee performance. The Pearson correlation coefficient (r) between training and development programs and employee performance is 0.771, indicating a strong positive correlation. This suggests that as training and development programs improve, employee performance also tends to improve significantly. The p-value (Sig. 2-tailed) for this correlation is 0.020, which is less than the 0.05 significance level, confirming that the correlation is statistically significant. Additionally, the reverse correlation between employee performance and training and development programs shows a coefficient of 0.771 with a highly significant p-value of 0.020. Both correlations are significant at the 0.01 level, reinforcing the strong positive relationship between these variables.

### Hypothesis Two

**Table 6 Pearson product moment correlation test analysis of relationship between Performance-Based Incentive Systems and employee performance**

| | | Performance-Based Incentive Systems | Employee performance |
|---|---|---|---|
| Performance-Based Incentive Systems | Pearson Correlation | 1 | .713 |
| | Sig. (2-tailed) | | .000 |
| | N | 128 | 351 |
| Employee performance | Pearson Correlation | .713 | 1 |
| | Sig. (2-tailed) | .000 | |
| | N | 128 | 128 |

. Correlation is significant at the 0.01 level (2-tailed).

**Source: Field survey, 2024**

Table 6 above shows the Pearson product-moment correlation test analysis of the relationship between performance-based incentive systems and employee performance. The Pearson correlation coefficient (r) between performance-based incentive systems and employee performance is 0.713, indicating a strong positive correlation. This implies that better performance-based incentive systems are associated with higher employee performance. The p-value (Sig. 2-tailed) for this correlation is 0.000, which is less than the 0.01 significance level, demonstrating that the correlation is statistically significant. Similarly, the reverse correlation between employee performance and performance-based incentive systems also shows a coefficient of 0.713 with a p-value of 0.000, confirming the significant positive relationship from both perspectives.

**Hypothesis Three**

**Table 7 Pearson product moment correlation test analysis of relationship between Recruitment and selection processes and employee performance**

| | | Recruitment and selection processes | Employee performance |
|---|---|---|---|
| Recruitment and selection processes | Pearson Correlation | 1 | .704 |
| | Sig. (2-tailed) | | .000 |
| | N | 128 | 128 |
| Employee performance | Pearson Correlation | .704 | 1 |
| | Sig. (2-tailed) | .000 | |
| | N | 128 | 128 |

. Correlation is significant at the 0.01 level (2-tailed).

**Source: Field survey, 2024**

Table 7 presents the Pearson product-moment correlation test analysis of the relationship between recruitment and selection processes and employee performance. The Pearson correlation coefficient (r) between recruitment and selection processes and employee performance is 0.704, indicating a strong positive correlation. This suggests that effective recruitment and selection processes are associated with higher employee performance. The p-value (Sig. 2-tailed) for this correlation is 0.000, which is less than the 0.01 significance level, indicating that the correlation is statistically significant. Likewise, the correlation between employee performance and recruitment and selection processes also shows a coefficient of 0.704 with a p-value of 0.000, confirming the significant positive relationship from both perspectives.

### 4.2 Discussion of Findings

Test of Hypothesis one (**$H0_1$**) reveals a significant positive relationship between training and development programmes and employee performance. The findings of this lends credence to the study of Maimuna and Fard, (2013) which reveals that for organizations to achieve optimum returns from their investment, there is imperative need to effectively manage training and development programmes.

This study, on human resource management (HRM) practices at Dangote Company in Gboko revealed significant positive correlations between training and development programs, recruitment processes, performance, and selection procedures. According to Sadek (2016), HRM practices are a strategic approach to managing people effectively within an organization to gain a competitive edge,

designed to maximize employee performance in line with the employer's strategic objectives. The hypothesis test indicated that transparent and well-structured recruitment and selection processes positively impact employee performance.

Arshad, Masood, and Naseer (2014) investigated the effect of performance appraisal systems on employee performance in the banking sector. Their research showed that transparent performance reviews boost employee motivation, job satisfaction, and performance. Analyzing survey responses from 150 banking employees, they concluded that regular, constructive feedback is vital for improving performance appraisal systems to create a productive work environment.

Nazar (2016) examined the individual and combined effects of HRM practices on organizational citizenship behavior (OCB) among Sudanese banking employee. Using questionnaires distributed to 298 respondents from the Sudanese French Bank, Saudi Sudanese Bank, and National Bank of Abu Dhabi, the study employed Pearson correlation analysis to explore the relationship between HRM practices and OCB. Multiple regression analysis revealed that while all HRM practices studied had positive effects on OCB, some practices were more strongly correlated with OCB than others. Ekwoaba, Ikeije, and Ufoma (2015) focused on the effectiveness of recruitment and selection processes in identifying qualified candidates and enhancing employee performance in the IT industry. Their survey of 200 IT professionals found that rigorous and transparent recruitment processes significantly contribute to employee productivity and organizational performance. The findings suggested that selecting the right candidates leads to better job fit and higher performance levels, highlighting the importance of efficient recruitment and selection practices.

**Conclusion**

An analysis of human resource management practices (HRMP) at Dangote Cement Company in Gboko reveals that employee performance is significantly enhanced by well-organized training and development programs, performance-based incentive systems, and rigorous recruitment and selection procedures. The study demonstrates that well-structured training initiatives boost employee skills, job satisfaction, and overall performance, aligning with broader empirical findings. Performance-based incentives have been shown to motivate employees, resulting in increased productivity and job satisfaction. Additionally, transparent and efficient recruitment processes are linked to higher organizational success and employee productivity. These findings underscore the importance of HRM strategies tailored to the cement manufacturing sector in Nigeria, considering its unique socio-cultural and economic context.

**Recommendations**

i. Dangote Cement Company Gboko should prioritize regularly updating and enhancing training programs to ensure employee skills remain competitive and aligned with the evolving demands of the cement manufacturing sector.
ii. Implementing fair and comprehensive performance-based incentive systems, reinforcing transparent recruitment processes,
iii. Tailoring HRM practices to meet industry-specific needs, and conducting regular evaluations will collectively optimize employee performance and drive organizational success at Dangote Cement Company Gboko.

**Limitations and Suggestions for Further Studies**

The study was limited to only Dangote Cement Plant, future studies should focus on other manufacturing industries and firms all over the country.
